The schematic diagram shows a Voltage Conditioning section and a Current Conditioning section. The Voltage Conditioning section includes components such as capacitors and resistors, with labels like "+5V," "12V_GND_IN," and "VP_ADC." The Current Conditioning section also includes similar components and labels. Specific connections and annotations are present, indicating the flow of current and voltage through the circuit. The diagram is detailed with specific component placements and connections, showing how different parts of the system are interconnected.
