### Conclusion

This report summarizes the reliability tests applied to USCi's 6 inch 650V SiC JBS diode product family. Testing was performed on die packaged in 3 lead TO-247 and 2 lead TO-220 discrete packages which were then subjected to industry standard testing as described in the AEC-Q101 specification and listed above. The platform has met all USCi's qualification requirements and is available for unrestricted use.
